Working within the community:

We ensure that all of our experienced teams respect the people and environment in which we work.

UTL first started working with Barchester in 2001 when we installed two cables into 20 homes within Barchester Care Villages throughout the country; this project was completed with no issues during installation or call backs post completion.

Following on from this successful project we have continued to build on our relationship and have worked in partnership with Barchester installing predominantly Category 5E and Fibre Optic cabling throughout the United Kingdom as and when required. We also install interactive whiteboard systems, and more recently have begun the installation of wireless networks, to allow staff to work more efficiently and residents to use tablets etc.

To date we have worked at over 60% of Barchester Healthcare sites from Thurso all the way down to Truro.

UTL provide a range of cabling services to Barchester including:

- Category 5E cable installation
- Fibre optics
- Projector / whiteboard installation
- Wireless network installation
- Cabinet rationalisation and relocation
- Active hardware supply
- Telephone cable installation
